Pain relief and more!

In Germany, between 10 and 12 million people suffer from chronic pain. One of these pain conditions, with a frequency of up to 20%, is the heel spur. Due to the interaction between body and psyche, they influence our well-being and quality of life.

The holistic approach of CHUNG SHI products deals precisely with this connection between physical and mental suffering. Giving joy of life through pain reduction is what drives us.

On the following pages, our „SHOEting Stars“ illustrate how they can relieve pain and improve your daily life, thereby keeping you healthy and active.

In addition, we give a small insight into our „think tank“ for new products and our first running shoe, the run2balance FLOW, which brings (hobby) runners to running with fun in a simple and body-friendly way.

In addition, we show you how we try to live up to our responsibility towards our environment with small green steps every day. And on page 6, we invite you to become part of our CHUNG SHI family,

because CHUNG SHI stands for pain relief and more!

Thank you for your trust!

Development

Product development: With heart and mind

Product development at *ME & Friends AG* is strongly influenced by the personality of the founder, owner and CEO, Michael Ertl. **Genuine function, reliable quality** and **responsibility towards the environment and people** in production and procurement are important cornerstones.

When coming up with ideas for new products, Michael Ertl always gives his thoughts and also his feet free rein. What is important to him is to strike a balance between creative vision and the recognition of market potential.

Also of particular value is the company's own „**German engineering**“ and quality management based on German quality standards, supplemented by medical expertise from Germany.

A continuous process

The product development process is never finished. It is continuously enhanced by a **permanent optimization process** and by the **welcome feedback** from complaints and from our trade partners. Thus, over the past 20 years, many of our products have been created by responding to the **wishes and needs of our customers**. With this incentive is also the successful product *DUX Clog*, with the **only real pain relief for heel spurs and plantar fasciitis**, was developed.

And continuously further innovations...

Creativity and customer feedback have also recently led to the new running shoe *run2balance FLOW*, which brings „motionless people“ back to mobility easily and painlessly.

Product development: **Best as a team**

This combination of **innovative vision** = „mind“ and **consideration of customer needs** = „heart“ is decisive for the entire product portfolio of **ME & Friends AG** with all its own and third-party brands, which are innovative and pioneering in many areas.

And now we would like to invite you,

to become part of this product development yourself!
Send us your ideas and wishes.

The easiest way to do this is directly on our website:
www.chung-shi.com/de/ideen
or directly on your mobile phone via this QR-Code:

**We reward the coolest suggestions

A short story of heel spurs and more..

By Michael Ertl

Heel spur and plantar fasciitis

One foot problem that affects more than 10% of the world's population in their lifetime is heel spurs.

This is a thorn-shaped bone growth on the heel bone which, in conjunction with the often associated inflammation of the plantar tendon (plantar fasciitis), can cause very unpleasant pain below the heel. The pain, which is often felt as sharp and burning, runs through the whole leg and takes away any pleasure in movement.

A heel spur usually develops unnoticed. Painful symptoms only develop when inflammation has already occurred in the surrounding tissue.

Most treatments and operations usual-

ly only help in the short term, because they symptoms are treated and not the cause.

Recommended treatment methods to combat the cause are stretching and strengthening exercises for the foot. In the case of acute heel spur disease, it is always advisable first of all to rest the foot so that the pain is relieved.

The only real pain relief for heel spurs

Due to the pain-related restriction in the entire range of movement, immediate relief of the inflamed tissue is desirable. Comfortable shoes with soft, cushioning soles can help decisively here.

The **DUX Clog** in particular, due to its construction height and softness, allows for a gentle bedding and cushioning and thus **acute and quick pain relief**. We also apply this principle to other **Duflex** shoes in an appropriately adapted form, depending on the area of application.

In addition to immediate pain relief, the resilience of the material also creates a **training stimulus** that exercises the plantar fascia and thus **prevents inflammation** in the long term.

For my heel spur...

...the **DUX** was a lifesaver.
Now I can move again
without pain.

Even 10-hour shifts...

...don't cause me any problems.
My feet are comfortable
in the **DUX** all day long.

I never had foot problems...

...and with all my **DUX** I make
sure it will stay that way
in the future!

Permanent protection – „Back to Mobility“

Especially people whose feet are constantly exposed to overloads due to movement-intensive activities, standing jobs or too much body weight become susceptible to foot, back and joint diseases of all kinds.

It is therefore all the more important to prevent this with the right footwear. **Duflex shoes** offer **permanent preventive protection** and THE CHANCE for **healthy mobility**.

The „more“: DUX for all of us

Each of us takes preventive measures in our daily lives: We take vitamins to strengthen our immune system. We drive cars with airbags (hoping we will never need them). We use sunscreen against sunburn and wear a helmet as head protection when cycling.

So why not wear shoes that, on the one hand, effectively relieve pain in sufferers and, on the other, are not only extremely comfortable in everyday life, but also provide a training stimulus that prevents pain from arising in the first place?!

I like to call this the „Haribo concept“ in reference to a well-known confectionery manufacturer:

DUX makes sick feet happy - and healthy ones too!

Because that is crucial:

With the **DUX**, you prevent pain from occurring in the first place
and stay healthy and active into old age!

Photo: Winkler

Natalie Geisenberger

Interview with the multiple Olympic medallist and World Cup winner

This edition of the Magalog is all about Magalog is all about „SHOEting Stars“. In German top-level sport, you have been one of the shooting stars and most successful athletes since the beginning of your career.

First of all, congratulations on your impressive and great achievements. On the Olympics website* you are described as „the most decorated Olympian“ in Beijing 2022. In Beijing. How does it feel to be able to celebrate these successes?

A great feeling. To be rewarded like this for years of hard work is simply something very special and I am incredibly grateful for the great moments and successes.

The last few years in particular were certainly a very stressful time. What does your regeneration

look like after these successes? And is there a general routine in your recovery after sports?

After the birth of my son two years ago, my/our life changed completely, of course. Suddenly there's this little person and everything revolves around him. Sport was then only number two in my life. I adjusted my training accordingly. I noticed that my body needs longer to regenerate completely. That's why I did a little less and added more quality. I also have regular appointments with a physiotherapist and get as much rest and sleep as possible.

In elite sport and especially in luge, the body is exposed to high speeds and strong forces, and the pressure to perform also plays an important role.

What is your secret to staying fit holistically, mentally and physically?

I don't really have „the one“ secret. It's just that everything has often worked out for me. It's a holistic well-being of body and mind, combined with disciplined training. To be successful, you have to believe in yourself and your abilities. I have always done that. On top of that, I enjoy the full support of my great family and my coaches, who have always encouraged me in my abilities and my performance.

CHUNG SHI translated from Cantonese means „to develop personally, to grow personally“. Especially in sports, one can witness your personal development as a fan. But your professional career as a senior police officer also suggests your ambition. How important is personal growth and development to you and are there other areas that you focus on in your growth?

I am a person who, when I want to tackle and achieve something, really gives everything to it. This discipline has intensified and strengthened over the years. Personal development is crucial and particularly important for me. Of course, there were also - fortunately very few - days when I was a little less motivated and training was more difficult for me. But when I had a training session on my schedule, I did it and could go to bed satisfied at night.

You have known the CHUNG SHI brand and its products for several years. Is there a model that your feet have fallen in love with? And which model would you put on your Leo for the healthy development of his feet?

My whole family and I love the DUX clogs. They're super practical in and around the house or in the garden, and they're also incredibly comfortable. And - very important for me as a woman - they come in so many great colours, there really is something for everyone. Leo has already received his first pair of DUX clogs and is thrilled.

Thank you very much for this interview and all the best for you and your family in the future!

„Climate protection is the responsibility of every company. In view of our responsibility towards our future generations, this is non-negotiable. Consistently climate-friendly business is the only way for a sustainable future!“

Michael Ertl, CEO & Founder ME & Friends AG

time to balance – TIME TO THINK GREEN

Responsible treatment of the environment and its resources is a matter close to our hearts at **ME & Friends AG**, but it is also a challenge. We are happy to take on this task every day and

are proud to have been a climate-neutral company since 2021. As a successful company, it is our duty to take one step further every day with courage and innovative strength.

Sustainable products

ME & Friends AG has been climate neutral with all its products since 2021. In addition, we carry products made from **recycled or bio-based materials**. In this way, we give our customers the chance to choose more climate protection when shopping.

Small green steps

Small, everyday actions make a difference, because taken together they can still have a big effect on our carbon footprint.

Sustainable parcel tape:

Since the beginning of this year, we have switched to **environmentally friendly parcel tape** made exclusively out of paper for our import transport packaging.

Service on demand:

In our efforts to act sustainably, we want to prevent products from being simply thrown away without ever being used or consumed.

We implement this timely customer service by **supplying spare parts only when they are needed**. This enables us to eliminate environmentally harmful packaging in the order of 2 tonnes per year.

In-house cardboard recycling:

In addition to our participation in the dual waste disposal system, we **involve ourselves in the disposal process** because we consider cardboard and paper to be a valuable raw material. In special in-house presses, non-recyclable waste cardboard is compressed and processed for recycling.

Strategic environmental management in the supply chain:

Together with our suppliers and transport partners, we work to **minimise ecologically negative impacts**. Whether in the production process, shipping or the subsequent thermal recycling of the products at the end of their life, greenhouse gas emissions are monitored and compensated.

Investment in our future

To compensate for our unavoidable emissions, we invest in certified gold standard climate protection projects worldwide. These include **investments in wind power** in India and **reforestation projects in Uganda**. In addition to the many positive ecological benefits of these projects, the local population is always in the foreground as a beneficiary. And that makes us proud and we are grateful to be able to live up to our social responsibility here.

BACK TO SPORTS

with the run2balance running shoes from CHUNG SHI

Why is there now a running shoe from CHUNG SHI?

Statement by Michael Ertl

In recent years, our customers have repeatedly asked us about **CHUNG SHI** running shoes. We took this request to heart and thought about how we could translate our expertise in **pain relief** and **proprioception** into **real function** in a running shoe.

That's why we deliberately took a lot of time to develop the shoe. Many ideas, concepts and techniques as well as experience with our existing product range are the basis for this running shoe. It was just as important for us to make the shoe climate neutral, which we achieved in 2021.

In our company's early days, our strategic focus was always on moderate forms of exercise such

as Nordic walking. But our passion is to give joy to life with our products. And running - whether for experienced runners or newcomers - means fun and improving the body's own awareness.

The **run2balance** collection is designed for people who want to run **gently** and **with pleasure**.

In order to make running comfortable and, above all, to be able to compensate for the discomfort caused by running, it is important to compensate for the high impact forces. The **run2balance** collection has not only succeeded in dampening these forces, but also in transforming them into an **energetic propulsion** and **minimising the rotational forces** acting on **knees and joints**.

The run2balance technique

In the gait analysis of the run2balance Flow, the forces generated in the running movement are absorbed by the construction height, „crumple zone“ and traction lines in the outsole, stored and converted into a springy forward movement. This has the following effect on the individual running phases:

Step and landing phase

In **run2balance Flow**, the forces acting during landing are absorbed by the **height of the sole construction**, which acts like a „crumple zone“ in the heel area, and absorbed in a joint-friendly manner by the so-called traction joint in the heel area - which deliberately „opens up“ during the landing phase.

The kinetic energy of the running movement is concentrated in the **Ultraboost material** and stored for a short time. Traction lines incorporated into the outsole bring this energy together and transfer it to the heel bone balcony in the midfoot area. This prevents too fast or too strong pronation during the transition to the push-off phase.

Swing and push-off phase

Now the stored kinetic energy is converted into potential energy in the direction of forward movement.

Responsible for this is, on the one hand, the **shape memory and resilience** of the Ultra-Boost material and, on the other hand, the incorporated rebound (difference in height of the sole between the heel and toe area), which, in combination with the **traction basin** (parabolic cavity on the inside of the outsole), converts this rebound effect into propulsion directed in the running direction and thus initiates the push-off phase.

Blasting

The rebound has a functional meaning in the **run2balance Flow**.

The energy released by the **rebound effect** is directed in the right direction - the running direction - by the explosion, the direction of the run, which creates the propulsion and the light springy running movement.

Material composition and characteristics

The multi-part material mix used in the upper, consisting of a two-tone jacquard material reinforced with TPU/nylon components, gives the foot **additional stability** without restricting mobility. The heel area is padded and seamless on the inside.

The additional lace holes on the upper shaft enable the reliable and well-known rope pull binding, which guides and fixes the heel bone well in its movement. A pleasant and comfortable foot climate is created by the **hydrophobic textile coating** of the insole and the strobelled construction.

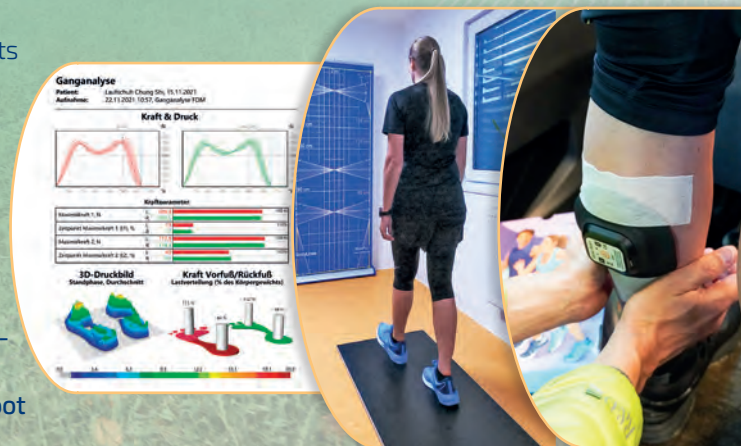

The special feature of the **run2balance Flow** is the rebound effect gained from the shape memory of the Ultraboost material, which is automatically guided in the right running direction via the explosion and traction lines. This reduces effort and rotational forces and allows the runner to move **HEALTHY, ACTIVELY** and with **FUN** without having to be very trained!

Study of the Institute 'Sportwissenschaft Oberland'

The construction of a running shoe should fulfil functional-biomechanical requirements in order to prevent the risk of overload phenomena on the musculoskeletal system. The properties and the operating principle of the **run2balance** were examined to check whether these demands are met.

Result:

„The **run2balance FLOW** can be recommended as a running shoe for (hobby) runners who run dominantly on the back and midfoot and are looking for a cushioning shoe.“

DUX Clog

that is like walking on clouds...

Recommended by orthopedic surgeons, the **DUX Clog** features a **super soft yet stable footbed**. The innovative thermoelastic **Duflex** material offers amazingly good relief when walking and standing for long periods of time. And very often, pain in the legs and feet are blown away.

Through body heat and weight, the **Duflex** material adapts to every foot shape and thus forms an individual footbed. This creates an even load distribution over the entire sole of the foot. Pressure peaks are reduced and a **walking sensation like walking on clouds** is created.

Users describe the **DUX** as an optimal **problem solver for heel spurs** and many other stress syndromes. It also reduces signs of fatigue in the legs. This makes the **DUX** the **ideal companion for activities that require long periods of standing and walking**.

The innovative Duflex material in a wide range of colors

The softness and lightness of the **Duflex** material offers all-round comfort in every respect as well as a **uniquely comfortable walking sensation**. The shoe is feather-light in weight, washable and also wipe-disinfectable.

In addition, several independent tests confirm that the **DUX Clog** is both **back-friendly**, **latex-free** and **absolutely free of harmful substances**.

Last but not least, the high satisfaction rate of the DUX fan community speaks for itself.

DUX Sensi

Caressing for sensitive feet

A butter-soft **Duflex** variant provides intensive, clearly noticeable pressure relief. The deliberately destabilizing, soft footbed **activates the muscle chains** and thus promotes balance. By intensifying contact with the sole of the foot, depth sensitivity (proprioception) is promoted and **the entire posture and movement process is improved**.

The special softtouch material is gentle on the joints and reduces pressure points.

The ultra-flexible footbed promotes blood circulation and supports the natural regeneration process in case of inflammations as well as postoperative treatments.

The **DUX Sensi** offers active **recovery and re-generation** for stressed feet after sports and after long periods of standing and walking. The gentle and soft walking feeling makes the **DUX Sensi** an absolute feel-good shoe, because you can't walk any softer: **caresses for your feet!**

DUX Bio

With renewable raw materials

By using up to 30% renewable raw materials, the DUX Bio makes use of a synthetic advance of nature. The organic components in combination with the pollutant-free Duflex material enable a stabilizing footbed.

As with all **Duflex** shoes, the sole adapts to every foot shape, creating an individual, soft footbed that reduces pressure peaks. The feeling of walking „like on clouds“ is created.

The **Dux Bio** is versatile as a professional and leisure clog that combines softness and stability - even with a little more body weight. In addition, the clog is back-friendly, latex-free and also absolutely free of harmful substances.

DUX Ortho

The stable all-rounder for job and leisure time

The insole-ready **DUX Ortho** with abrasion- and slip-resistant sole material optimizes foot position, improves rolling behavior and posture, and ensures **pain-free and safe mobility**.

The special construction between the upper and sole reduces pressure peaks and cushions the heel strike like an airbag.

An interchangeable footbed allows a **replacement with your own customized insoles**.

The closed shoe construction of the **DUX Ortho** provides splash and impact protection in the toe area and provides support and stability in the heel area.

The **DUX Ortho** is versatile as a work and professional clog, but also as a leisure shoe. A **combination of safety, comfort and functionality** for people who rely on a stable fit and want to secure the option for individual insoles.

*) available just for Ortho Clog in the colors black, white and navy

DUX Ortho Clog

The insole clog

In terms of construction, cushioning behavior and range of use, the clog variant corresponds to the **DUX Ortho** described on the left.

The **DUX Ortho Clog** differs only by an **open heel area**.

With the optionally usable heel strap, a secure hold is also guaranteed here.

Replacement insoles are available for **Ortho** and **Ortho Clog**, with labels color-coordinated with the colors of the shoes:

*) All prices incl. german VAT.

DUX Premium

Arch support, plenty of room and adjustable straps

The compact **Dux Premium** promotes foot mobility and stimulates the foot muscles. The softness of the pollutant-free **Duflex** material provides improved pressure distribution and pressure relief at the neuralgic points.

With sufficient space for the toes, punctual pressure loads on the inner and outer edges of the foot are reduced.

A heel cushion provides additional cushioning with every step.

The elevation in the metatarsal area activates the foot muscles and supports the natural straightening of the transverse arch. Therefore, it is also suitable for foot deformities such as flat and splay feet.

And with the adjustable heel strap, the support in the shoe can be regulated individually.

DUX Future

Extra stable, extra comfortable

Not only a shoe - but a holistic concept for pain-free mobility:

The soft **Duflex** material in the forefoot area, an interchangeable footbed with memory function and a stable substructure with high slip and abrasion resistance promote overall posture, relieve the spine and joints and provide a cushioned heel strike. The foot muscle pump is activated and shows positive effects on the venous return system.

With a closed forefoot area for splash and impact protection and a raised heel cup, the **DUX Future** is versatile as a professional or casual clog. An optional strap provides additional support.

The ideal model with exchangeable footbed - also for slightly more body weight - that combines softness and stability.

DUX Zori Sensi

As with the DUX Sensi (page 26), the butter-soft **Zori Sensi** variant provides intense and noticeable pressure relief. The destabilizing footbed activates the muscle chains, promotes balance and supports posture control.

The special Softtouch material is gentle on the joints and effective for pressure points and regeneration processes.

The **Zori Sensi** is the right choice for spa and wellness areas, on the beach and as a summer leisure shoe: the toe sandal for all-round comfort and for a uniquely comfortable walking experience.

DUX Ballerina

Elegance paired with massage

The shapely and feather-light **Dux Ballerina** offers stability, pressure relief and a stimulating foot massage.

Through body heat and weight, the pollutant-free **Duflex** material adapts to any foot shape, creating an individual footbed. The natural support in the metatarsal arch and the structured footbed and the structured footbed activate the foot muscles, stimulate blood stimulate blood circulation and reduce callus formation. The **Dux Ballerina** is cut in the forefoot area so, that the toes are covered.

It goes well with elegant wardrobe and is great to combine with summer outfits with shorts or skirts.

DUX Winter

Perfect for cold feet

The DUX Winter ensures alwayswarm feet with the sewn-in synthetic lining.

In addition, the unique, thermoelastic **Duflex** material adapts to every foot shape through body heat and weight, forming a perfect, individual footbed. The even load distribution over the entire sole reduces pressure peaks, creating the Duflex walking feeling „like walking on clouds“.

Users often describe the **DUX Winter** as their favorite shoe for cold feet. The cozy properties of the shoe are also highly appreciated in cases of metabolic disorders and during pregnancy. The clog, which is popular as a slipper, is back-friendly, latex-free, absolutely free from harmful substances and also completely vegan.

DUX Kids Clog

...because children's feet still have a lot to do!

The pollutant-free and back-friendly DUX Kids Clog promotes the natural and healthy development of children's feet.

The flexible material provides unique pressure relief, reduces fatigue and adapts to the child's individual foot shape through body heat and weight.

For healthy feet in adulthood, it is important to wear the right footwear in childhood to allow for **natural development**, as well as to functionally support active compensation of imbalances when body proportions change.

The high wearing comfort in combination with the material properties makes the shoe a **stable companion in all situations** that meet the demands of small children's feet as well as parents' wishes.

Good fit, light and flexible material as well as shock absorption in combination with freedom from harmful substances enable a motorically good and healthy development of the child's foot.

The AGR recommends that children's shoes should have a „high degree of material flexibility so that the movement of the child's foot can take place without restriction.“ ¹

Duxfree

The Duxfree collection is a comprehensive functional product range, consisting of

- **simple training shoes** (Active Line)
- **comfortable everyday companions** (Casual Line)
- **all-weather allrounders** (Outdoor Line)
- **Strength and joint-friendly running shoes** (Run Line).

The special feature of the Duxfree lines is the interplay of different upper materials with different sole constructions.

Depending on the fine-tuning of the upper and outsole, the shoe has a different lateral stability without compromising mobility and flexibility in the sole area.

The sole construction uses the innovative Duflex material, which has also proven itself in other CHUNG SHI models due to its lightness and softness.

In the new Run collection, the rebound effect gained from the shape memory of the Ultraboost material is transformed into an energetic propulsion and thus enables (amateur) runners to have a strength and joint-friendly running experience with a lot of fun.

Duxfree shoes provide a liberating and relieving walking experience and redefine comfortable mobility!

Trainer

For a liberating walking feeling

The Duxfree Trainer supports natural movement patterns and gives feet the freedom they crave during active exercise.

The harmoniously coordinated interaction of upper and outsole offers versatile applications and high wearing comfort.

The proprioception-promoting structure of the sole specifically causes muscle-stimulating instability. The flexible sole also allows unrestricted movement of the foot.

The sole is parceled, follows the movements of the foot, supports the natural rolling behavior and provides good traction in all directions. The necessary fixation is achieved with stabilizing material at the stress points of the outsole.

The textile mesh upper is stretchy and breathable, adapting to the anatomy of the foot like a second skin and providing a light-footed feel.

The Duxfree Trainer has cross-section round laces that allow for easier and moderate lacing without pressing on the top of the foot.

The flexible sole allows any movement. The foot has complete freedom. Continuous balancing movement trains the neglected foot and leg muscles.

A replaceable insole also allows individual foot care by the orthopedist.

The combination of lightweight and breathable upper material with the particularly flexible sole construction makes the shoe a companion for active mobility with a naturally liberating walking feeling.

Savannah und Nassau

Perfect relief for leisure and sports

The Duxfree line's signature interaction between upper and outsole to fine-tune lateral stability is also used here.

The special feature is an **upper mix of textile and suede** for a compact, breathable and secure feel.

Plenty of room for the toes in length, width and height and **soft padding inside** and on the shoe collar increase comfort for the foot and ankle.

The **pronounced sinking** in the heel and ball of the foot can reduce pain during movement.

Here, the **Duflex** material supports the alignment of the heel bone through material properties and sole construction, thus relieving the back and joints.

The **supportive sole construction** provides stability, freedom in the rolling movement, excellent cushioning and maximum wearing comfort for all activities in leisure and sports!

On the outside, the **punctually parcelled sole** provides **support** in the forward movement. Stress points are additionally reinforced with a more abrasion-resistant material.

Oval shoe laces facilitate foot positioning in the shoe for a secure hold without creating pressure points in the forefoot area.

Individual foot care by the orthopedist is also possible thanks to interchangeable insoles.

Kids und Junior

Safety and comfort for a healthy development

The *Duxfree Kids* and *Junior* models offer a blend of maximum performance and comfort for many areas of use, taking into account the anatomy of a child's foot.

Due to the rapid development of the child's foot, it is particularly important to address individually different developments and counteract any imbalances that may arise.

Stabilizing the stride and supporting the foot anatomy in the growth process is **crucial for tomorrow's foot health** and for preventing foot deformities.

The **parcellated sole made of soft Duflex material** adapts to all movements of the foot. It ensures a good formation of the sensorimotor system as well as a healthy development. The initial important heel contact is additionally supported with shock absorption with every step and simultaneous promotion of the natural rolling behavior.

An **upper material mix** of breathable textile and velour leather provides a compact and secure feel for carefree mobility in childhood.

Up to size 30, a Velcro fastening system makes it easy to put on and take off. From size 31, independent shoe tying may be practiced.

Whether on the playground, in the schoolyard or as a sporty leisure shoe: The *Duxfree Kids* is the optimal model for the first walking attempts. And later, the *Duxfree Junior* accompanies the transition to adult sizes.

As a stable partner for all adventures that meet the demands of children's feet as well as the wishes of parents.

Optimal fit, flexible material, shock absorption and a sole, that makes the ground tangible: this is what children's feet need to develop unhindered and prevent postural deformities.

Berlin

Comfortable and lightweight

The *Duxfree Berlin* caresses the anatomy of the foot with a breathable upper and its lightness gives a feeling of well-being that the feet crave while standing or walking.

The virtually seamless textile upper with multi-layer construction ensures a comfortable foot climate. Oval shoe laces specially designed for active mobility provide secure support and individual adjustment without constricting the arch of the foot.

Particular emphasis has also been placed on the *Duflex* sole construction, which **fine-tunes flexibility and stability** to ensure optimal movement without restricting the foot's mobility. The parceled sole is reinforced with a more stable material for lasting traction at the stress points.

Thereby the lightness of the shoe supports the interaction between the footwear and the ground and conveys a dynamic wearing sensation.

A replaceable insole also allows an individual foot care by the orthopedist.

With a sporty design and relaxed feel, the *Duxfree Berlin* is suitable not only as a training shoe, but also as a comfortable everyday companion.

A vacation for the feet in every situation.

run2balance FLOW

Back to Sports

The run2balance FLOW running shoe provides comfort as well as comprehensive shock absorption.

The compact feel combined with improved **stability** provides a **balanced step sensation**, resulting in smoother transitions in the movement process. At the same time, the springy cushioning grooves in the sole area, which are characteristic of **Duxfree**, support the forward movement and give the runner a floating running rhythm. Changes of direction are smooth and with **little effort**.

The **flexible textile upper** hugs the foot for a soft and breathable feel. In addition, individual foot care by the orthopaedist is possible with interchangeable insoles.

The special feature of the run2balance FLOW running shoe is the feeling of **holistic ground contact** in the running movement.

This promotes forward movement while simultaneously strengthening and securing the heel, preventing sideways wobbling back and forth in the running shoe.

The **stabilisation in the heel area** also strengthens the knee position and **reduces the risk of injury**. This makes the run2balance FLOW running shoe suitable for both experienced runners and beginners.

With the run2balance FLOW running shoe, running is simply fun!

The Casual Line

Healthy and active for everyday life and business

These high-quality sneakers convince with **soft footbed, good fit and a particularly pleasant wearing comfort.**

A variety of health-promoting aspects of the **Duxfree** collection have been incorporated into the development of these models. In addition to the soft footbed, these shoes support foot positioning and thus provide relief for the joints.

A structured, soft and changeable insole conveys pleasant massage with regenerative effects.

Innovative is the processed **Fly-Leather**, a new type of natural leather, which is **produced in an environmentally friendly recycling process** from used leather.

It is lighter, softer and more abrasion-resistant than classic full-grain leather.

Duxfree Bendigo

The raised plateau outsole of this women's sneaker is not just a fashion gimmick. It increases foot positioning and thus gives the wearer a stretched body sensation.

The generous arch shape is particularly suitable for feet with high insteps.

A visually appealing and functional all-rounder.

Beach

Airy feeling of well-being in the free time

The **Duxfree Beach** is a casual and lightweight canvas leisure shoe with extra comfort.

With smooth, easily spun fibers that trap little air, linen is breathable, tear-resistant, stain-resistant, lint-free, sweat-reducing and dimensionally stable.

The interchangeable insole is also covered with linen, providing a soft and dry footbed and supporting the springy effect of the extra-light **Duflex** sole.

On hot summer days, feet crave open-toed shoe styles. However, these offer little protection from injury and dirt. The **Duxfree Beach** is a great, light and airy alternative.

For ladies in ballerina style and for men as a loafer:

Both convince with their casual linen look and a cozy, summery feeling.

Beach Plus

With soothing foot massage

The **Duxfree Beach Plus** is an airy, lightweight leisure slip-on that impresses with its flexibility and is barely noticeable as a closed shoe thanks to the lightweight material.

The quick-drying upper is a synthetic blended fabric reminiscent of a canvas, with low weight, high air permeability and long life.

The anatomically shaped interchangeable footbed (in a striking yellow hue) features reflex zones that result in minimal massage and stimulation at foot stress points. The parceled sole design maintains flexibility and mobility in all directions.

The **Duxfree Beach Plus** is the ideal alternative to open-toed shoes, offering protection from injury and dirt as well as **versatility**, such as a sailing shoe or even a house and garden shoe.

Duflerino

Breathable, wool soft and lightweight

Duflerino models are wool soft and combine flexibility with stability for exceptional comfort, all year round.

Through the processing of a wool-synthetic blend material the positive properties of these two materials are combined. Wool regulates temperature, repels perspiration, is antibacterial and quickly wicks away moisture.

The natural air chambers of the wool ensure a temperature exchange between inside and outside.

This leads to a particularly pleasant wearing climate - in summer as well as in winter.

The synthetic content in the upper complements the properties of the wool, has a stabilizing effect and maintains the fit of the shoe.

The **Duflerino** is rounded off by the extra-light **Duflex** material in the sole area, which in this model has been equipped with a smooth, generous sole structure. This provides pleasant cushioning and stability with every step.

The **anatomically shaped interchangeable footbed** has a memory function as well as special cushioning at the stress points of the foot.

The soft and light Duflerino is available as a classic **lace-up shoe** and as a **casual loafer**. Both offer sufficient width in the toe area.

Shoes fit regular

SENSOMO

Women

Comfortable and extravagant

A successful composition of functionality and timeless elegance, born from the pursuit of completing real function in beautiful shoes.

The shoe is based on the special functionalities in the area of foot positioning, rolling behavior as well as in the fit and stylish design.

The women's collection is characterized by a special interplay of different color compositions between the upper and outsole, which can be worn on any occasion.

The feminine shoe collection is rounded off by the two loafer models, which, thanks to their slip-on function make it easy to put on and and take off.

By adapting the flexible sole to the individual anatomy of the foot, fine control of movement as well as natural and comfortable wearing comfort is made possible.

The use of high-quality leather in the upper as well as in the inner shoe enables a pleasant balanced foot climate.

SENSOMO **Men**

Comfortable and timeless

A casual shoe that offers versatility in casual and business looks.

The color combinations characteristic of the **Sensomo** collection are also found in some men's models. Combined with a stylish design, these shoes combine functionality and class.

The material properties of the outsole provide softness, cushioning and relief with every step.

The flexible sole adapts to the individual foot anatomy and allows for natural and comfortable wear.

The various high-quality genuine leather materials give each shoe its own look and are also durable, breathable and stretchy.

The suede used for the **Sensomo V** and **Sensomo I** models in brown/beige and dark brown/light blue has a textured surface and a pleasantly warm feel.

The smooth leather models **Sensomo III** and **Sensomo I** in light brown/light blue and black look classy and can be combined well with business outfits or chic casual looks.

CHUNG SHI products and company - multiple awarded

2003
ISPO Outdoor Award: The sole concept
of the AuBioRiG is awarded

Every year, the *ISPO AWARD* honors the outstanding products in the industry. An independent jury of experts evaluates according to precisely defined criteria and awards the products after evaluating the criteria.

In 2003, our *AuBioRiG* shoes received the coveted award for the newly developed sole concept and the outstanding market growth in the second year after its launch.

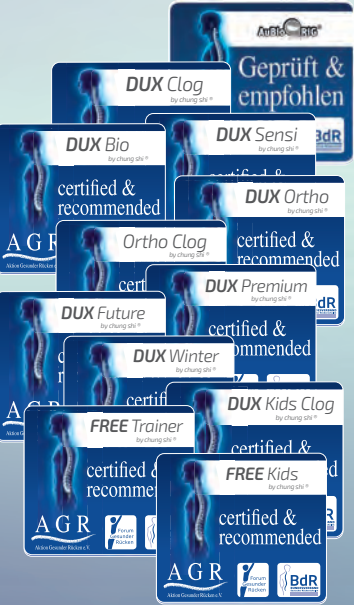

2015 until 2019
Plus X Awards

Various *Duflex* models received this award for ergonomic, ecological and high quality products.

The *Plus X Award* is the world's largest innovation award for the technology, sports and lifestyle sectors, which honors brands for the quality and innovative edge of their products.

Due to very good results in the areas of ergonomics, ecology, quality and functionality, the following products received the *Plus X Award*:

DUX Clog 2015, *DUX Future* and *Duxfree Berlin* 2018, *Duflerino* 2019.

2010
Aktion Gesunder Rücken e.V.
Certified back shoe award

The purpose of *Aktion Gesunder Rücken e.V. (AGR)* (eng. Healthy back campaign) is to promote research into the prevention of back pain and to disseminate the findings of these research efforts with the aim of contributing to the fight against the common affliction of back pain (§2 of the AGR e. V. statutes).

With the expertise gained from this and close cooperation with medical professionals, AGR certified the following *CHUNG SHI* brand models:

AuBioRig, *Duxfree Trainer*, *Duxfree Kids*, *DUX Clog*, *DUX Bio*, *DUX Sensi*, *DUX Ortho*, *DUX Ortho Clog*, *DUX Winter*, *DUX Premium* and *DUX Kids*.

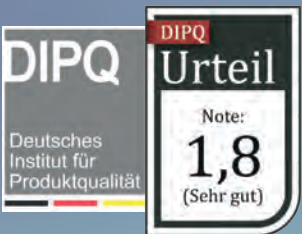

2021
ME & Friends AG and all products are climate neutral!
Small CO₂ footprint = big step for the climate

ME & Friends AG's commitment to climate protection was awarded the „very good“ seal of approval by the German Institute for Quality Standards and Testing (DIQP).

DIQP is an independent registered association that verifies a company's greenhouse gas emissions offsets as part of its certification process.

„Climate protection is one of the most important tasks of our generation,“ emphasizes Managing Director, Michael Ertl. „We have made the vision of a climate-friendly future part of our business strategy. And our long-term goal in doing so is not only to offset our emissions, but also to invest in climate protection projects.“

2018
DIPQ seal for product quality

The *DIPQ* (German Institute for Product Quality) analyzes customer ratings of products from all over the world and evaluates them in comparison with homogeneous product categories. The *DUX Clog* was determined to be the winner of the comparison with a grade of 1.8. and received the coveted *DIPQ* seal.
